

# The VARIO concept for the simulation of temperature und climatic chambers

## Refrigeration and climate modules

Many different designs and performance values.

## Radiation modules

For every size of chamber in different designs

## Electronical / Control modules

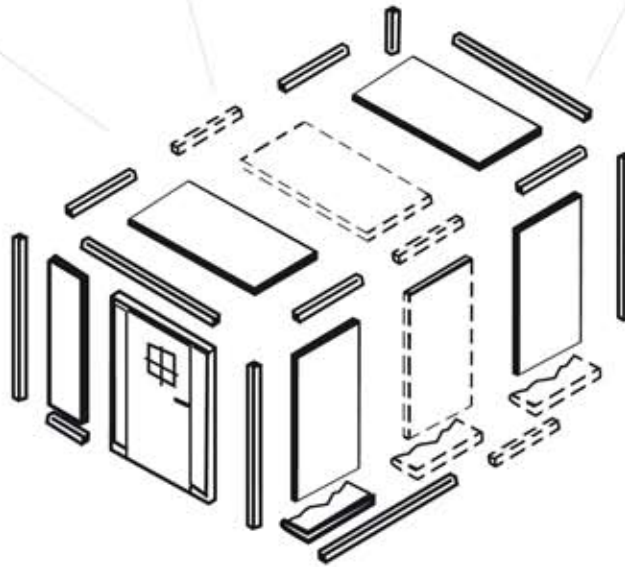

For temperature, climate and bio chambers with PLC

## Test room modules

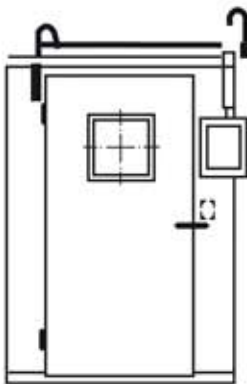

as compact chamber

as existing units

as modular chamber bodies in a lot of sizes

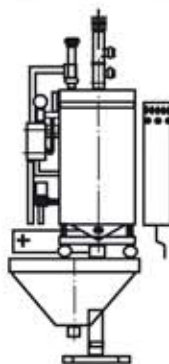

## Door modules

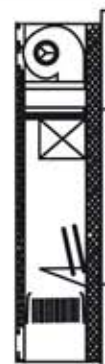

One- wing and double-wing doors in different versions in isolation and size.

## Humidification modules

Different versions and performances.

## Air conditioning modules

In different designs

additional a lot of modules for options such as e.g.

- Perforated ceilings
- Perforated walls
- Observation windows
- Fresh air units

- Temperature upgrading
- Sound insulation
- Deep dehumidification
- Indirect tempering
- Racks

- Defrosting systems
- Decontamination of the circulating air
- Explosion proof
- Air filtering
- Specimen protection
